Internships and Research

Jan 2020 - present **Research assistant at UT Austin Vision Lab**
Advisor - Prof. Kristen Grauman

- Built an RL based state-of-the-art audio-visual navigation system with a novel subgoal prediction model and a novel acoustic memory design
- Currently working on audio separation using active and embodied learning

Aug 20219 - Dec 2019 **Student in Graduate Natural Language Processing course at UT Austin**
Advisor - Prof. Greg Durrett

- Built a novel state-of-the-art adversarial defense for question answering that uses a model-agnostic answer reranking mechanism by computing named entity overlap between questions and candidate answers

Jan 2018 - May 2019 **Research assistant at Goethe University**
Advisor - Prof. Visvanathan Ramesh

- Built a continual learning framework by integrating a variational autoencoder based deep generative replay model and a statistical outlier rejection technique (OpenSet) that outperformed the state-of-the-art
- Curated a novel dataset for multi-target concrete bridge defect identification, meta-learned task specific neural architectures that outperformed strong baselines and transfer-learned models
- Investigated a common architectural design practice of monotonically increasing feature amounts with depth in CNNs, through parameterization of feature distribution across layers and obtained results that contradict this practice

May 2017 - *May* 2019 **Research intern at Frankfurt Institute for Advanced Studies**
Advisor - Prof. Christoph Malsburg

- Created a distortion invariant handwritten digit recognition system with Gabor filters and an elastic graph matching algorithm
- Worked on motion parameter estimation and prediction of rigid rotating objects and implemented a neural version of the Kalman filter
